PATIENT DEMOGRAPHICS & REGISTRATION

Patient Name:	Mrs. Meena Kumari	UHID:	AMOC-2023-550912
Age / Sex:	45 Years / Female	Episode ID:	OP-994112
Date of Visit:	02-Dec-2023	Consultant:	Dr. Vikram Singh, MD, DM
Blood Group:	B Positive	Department:	Medical Oncology
Height:	160 cm	Weight (BSA):	62 kg (1.64 m ²)

1. CHIEF COMPLAINT

Patient presents for Cycle 3 of adjuvant chemotherapy following Modified Radical Mastectomy (MRM) of the right breast. Complains of mild nausea, fatigue, and grade 1 peripheral neuropathy in fingers bilaterally over the last 5 days. No fever, no vomiting, no severe diarrhea, and no dyspnea.

2. DETAILED HISTORY OF PRESENT ILLNESS (HPI)

Mrs. Meena Kumari, a 45-year-old premenopausal female, was diagnosed with Carcinoma Right Breast (Invasive Ductal Carcinoma, Grade II) in September 2023 after noticing a palpable painless lump in the right upper outer quadrant. Core needle biopsy confirmed malignancy. ER/PR status: ER Positive (80%), PR Positive (60%), HER2/neu Negative (Score 1+). Ki-67 proliferation index was 25%.

She underwent Right Modified Radical Mastectomy (MRM) with Level I & II Axillary Lymph Node Dissection on 10-Oct-2023. Final histopathology revealed a 3.2 cm tumor, with 3 out of 14 axillary lymph nodes positive for metastatic carcinoma. Margins were free of tumor. Pathological staging: pT2 N1a M0 (Stage IIB).

Case was discussed in the Multi-Disciplinary Tumor Board, and the consensus was to proceed with Adjuvant Chemotherapy comprising 4 cycles of AC (Doxorubicin + Cyclophosphamide) followed by 4 cycles of Paclitaxel, followed by locoregional radiation therapy, and subsequently endocrine therapy for 5-10 years.

She completed Cycle 1 of AC on 01-Nov-2023 and Cycle 2 on 22-Nov-2023. Tolerance has been fair, though she developed Grade 2 Alopecia (expected) and Grade 1 sensory neuropathy. She is here today for pre-chemo evaluation for Cycle 3 of AC regimen.

3. PAST MEDICAL, SURGICAL, AND FAMILY HISTORY

Past Medical History: Hypothyroidism diagnosed 3 years ago, well-controlled on Tab. Thyroxine 50 mcg daily. No history of hypertension, diabetes, or asthma.

Surgical History: Right MRM (Oct 2023). Appendectomy at age 22.

Family History: Mother had ovarian cancer diagnosed at age 62 (deceased at 65). Maternal aunt had breast cancer at age 55. Genetic testing (BRCA1/2) was offered and the report is currently awaited.

Allergies: No known drug allergies (NKDA). Specifically, no allergy to Sulfa drugs or Penicillin.

4. REVIEW OF SYSTEMS

- **Constitutional:** Mild fatigue present. No significant weight loss.
- **HEENT:** No vision changes. Alopecia totalis noted. Mucositis absent.
- **Cardiovascular:** No chest pain, palpitations, or orthopnea. Baseline LVEF was 60%.
- **Respiratory:** No cough, shortness of breath, or hemoptysis.
- **Gastrointestinal:** Mild nausea (Grade 1). Bowel movements normal. No melena.
- **Neurological:** Tingling sensation in fingertips (Grade 1 neuropathy). No motor weakness.

5. PHYSICAL EXAMINATION

Vitals: BP 120/78 mmHg | HR 88 bpm | RR 16/min | Temp 98.2°F | SpO2 99% RA.

General Appearance: Conscious, oriented, ambulatory. ECOG Performance Status: 1. Alopecia present. Port-a-cath in situ on the left chest wall, site appears clean, no erythema or discharge.

Chest / Breast: Right chest wall post-MRM scar is healing well by primary intention. No induration, no swelling. Left breast is clinically normal, no palpable masses. Bilateral axillae show no palpable pathological lymph nodes. Supraclavicular fossae are clear.

Systemic Exam: S1S2 audible, normal rhythm. Clear lungs bilaterally. Abdomen soft, non-tender, non-distended. No pedal edema.

6. ADJUVANT CHEMOTHERAPY PROTOCOL: AC REGIMEN (CYCLE 3 OF 4)

Regimen Details: Doxorubicin (Adriamycin) + Cyclophosphamide.

BSA: 1.64 m²

Frequency: Every 21 days (Q3W).

Date of Administration: Planned for 03-Dec-2023.

Drug Name	Target Dose	Calculated Dose	Route / Fluid	Duration
-----------	-------------	-----------------	---------------	----------

Inj. Doxorubicin	60 mg/m ²	98.4 mg	IV Push via Port	10-15 mins
Inj. Cyclophosphamide	600 mg/m ²	984 mg	IV in 250ml NS	30-60 mins

Pre-medications: Inj. Ondansetron 8mg IV, Inj. Dexamethasone 12mg IV, Inj. Ranitidine 50mg IV 30 minutes prior to chemotherapy.

Post-hydration: 1 Liter Normal Saline over 2 hours post-chemo.

7. DISCHARGE MEDICATIONS (TAKE HOME)

Drug Formulation	Generic Name	Dose	Frequency	Duration
Tab. Emeset	Ondansetron	8 mg	1-1-1	3 Days (Post chemo)
Tab. Dexa	Dexamethasone	4 mg	1-0-1	3 Days
Cap. Pan	Pantoprazole	40 mg	1-0-0	5 Days
Tab. Thyronorm	Levothyroxine	50 mcg	1-0-0	Continuous (empty stomach)
Syr. Sucrafil O Gel	Sucralfate	10 ml	1-1-1	SOS for mouth ulcers
Tab. Crocin Advance	Paracetamol	650 mg	SOS	For fever/pain

Note: Inj. Pegfilgrastim 6mg SC to be given 24 hours after completion of chemotherapy (on Day 2) to prevent neutropenia.

8. LABORATORY & DIAGNOSTIC ORDERS

- Complete Blood Picture (CBP) prior to Cycle 3 (Done: Hb 10.5 g/dL, ANC 2500/μL, Plt 210,000/μL - Cleared for Chemo).
- Renal Function Test (RFT) and Liver Function Test (LFT) - Within normal limits.
- 2D Echo to reassess LVEF prior to Cycle 4.
- Follow-up CBC on Day 10 of cycle to check for nadir.

9. DIET AND LIFESTYLE INSTRUCTIONS

Patient is advised to consume a high-protein, hygienic, well-cooked diet. Avoid raw salads, unpasteurized dairy, and outside food to minimize the risk of gastrointestinal infections during the neutropenic phase. Maintain strict personal hygiene and oral care (rinse mouth with normal saline or non-alcoholic mouthwash 4 times a day). Avoid crowded places and contact with individuals suffering from communicable diseases.

10. ESTIMATED BILLING & FINANCIALS

Service / Item Description	Amount (₹)
Oncology Consultant Review Fee	₹ 1,800.00
Pre-chemo Lab Package (CBC, RFT, LFT)	₹ 2,400.00
Chemotherapy Day Care Room Rent (up to 6 hrs)	₹ 3,500.00
Nursing & Chemotherapy Administration Charges	₹ 1,500.00
Inj. Doxorubicin (100 mg vial)	₹ 1,250.00
Inj. Cyclophosphamide (1000 mg vial)	₹ 450.00
Inj. Pegfilgrastim (6mg PFS)	₹ 3,800.00
Pre-medications, Fluids, and Consumables (Syringes, IV sets)	₹ 1,150.00
Take-home Pharmacy	₹ 850.00
Total Estimated Episode Cost	₹ 16,700.00

Next Scheduled Visit: 23-Dec-2023 for Cycle 4 Evaluation.

Emergency Contact: In case of fever > 100.5°F, severe bleeding, or intractable vomiting, report immediately to Apollo-Max ER (011-45678999).
