NABH Accredited | Reg No: TS/HSP/2015/0981

Patient Name: Mr. Venkatesh Rao	UHID: CHI-2023-991023
Age/Gender: 58 Yrs / Male	Date of Visit: 12-Nov-2023
DOB: 14-Aug-1965	Department: Cardiology
Contact: +91-9848012345	Consultant: Dr. Sneha Reddy, MD, DM (Cardio)
Address: Flat 4B, Emerald Heights, Banjara Hills, Hyderabad	

1. Chief Complaint & History of Present Illness

Mr. Venkatesh Rao presents with a 2-week history of exertional angina, described as a pressure-like sensation in the central chest radiating to the left arm, brought on by walking briskly and relieved by 5 minutes of rest. He also reports mild shortness of breath on exertion. No history of syncope, palpitations, or orthopnea.

Past Medical History is significant for long-standing Essential Hypertension (diagnosed 10 years ago) and Type 2 Diabetes Mellitus (diagnosed 5 years ago). He is a former smoker (quit 5 years ago, 20 pack-year history).

2. Clinical Examination & Vitals

Parameter	Value	Parameter	Value
Blood Pressure	158/92 mmHg	Pulse Rate	84 bpm, regular
Respiratory Rate	18 / min	Temperature	98.4 °F
SpO2	97% (Room Air)	BMI	28.4 kg/m ²

CVS: S1, S2 heard normally. No murmurs, rubs, or gallops. JVP is normal.

RS: Bilateral vesicular breath sounds. No crackles or wheezing.

Extremities: No pedal edema. Peripheral pulses palpable and symmetric.

3. Initial Investigations & ECG Findings

Resting 12-lead ECG performed in clinic shows Sinus Rhythm at 82 bpm, with T-wave inversions in leads V4-V6 and II, III, aVF, highly suggestive of lateral and inferior ischemia. QTc is 420ms.

4. Diagnosis

- Coronary Artery Disease (CAD) - Chronic Stable Angina (CCS Class II)
- Uncontrolled Essential Hypertension
- Type 2 Diabetes Mellitus
- Dyslipidemia

5. Recommended Laboratory & Diagnostic Tests

Test Category	Specific Tests Requested
Blood Routine	CBC, Fasting Lipid Profile, Fasting Blood Sugar, HbA1c
Cardiac Biomarkers	High-sensitivity Troponin I (hs-TnI), NT-proBNP
Renal & Hepatic	Serum Creatinine, eGFR, Liver Function Test (LFT)
Imaging	2D Echocardiography with Color Doppler
Further Eval	CT Coronary Angiography (CTCA) - Scheduled for 15-Nov-2023

6. Medications Prescribed

Medicine Name	Generic	Strength	Dosage	Duration	Instructions
Tab. Ecosprin	Aspirin	75 mg	0-1-0	30 Days	After lunch
Tab. Brilinta	Ticagrelor	90 mg	1-0-1	30 Days	Morning & Night
Tab. Metolar XR	Metoprolol Succinate	25 mg	1-0-0	30 Days	Morning after breakfast
Tab. Rosumac Gold	Rosuvastatin + Clopidogrel	20/75 mg	0-0-1	30 Days	Night time
Tab. Glycomet GP 1	Glimepiride + Metformin	1/500 mg	1-0-1	30 Days	Before meals

Tab. Telmiking	Telmisartan	40 mg	1-0-0	30 Days	Morning
Spray Nitrolingual	Nitroglycerin	0.4 mg/dose	SOS	-	Under tongue for chest pain. Max 3 sprays in 15 mins.

7. Diet & Lifestyle Modification

Dietary compliance is critical. The patient is advised to adhere to a strict DASH (Dietary Approaches to Stop Hypertension) diet. Sodium intake must be restricted to less than 1.5g per day. Avoid all processed foods, pickles, and papads. Substitute saturated fats (butter, ghee) with polyunsaturated fats (olive oil, sunflower oil) in moderation.

Activity: Avoid strenuous physical exertion or heavy lifting until the CT Coronary Angiogram is evaluated. Mild, slow-paced walking on flat ground for 20 minutes is permissible if symptom-free.

Emergency Warning: If chest pain persists for more than 15 minutes despite 2 doses of Nitroglycerin spray, proceed immediately to the nearest Emergency Department.

Estimated Billing & Charges

Cardiology Consultation (First Visit)	₹ 1,500.00
Hospital Registration Fee	₹ 250.00
12-Lead ECG	₹ 450.00
2D Echocardiography	₹ 2,200.00
Comprehensive Lab Package (Lipid, HbA1c, LFT, KFT, CBC)	₹ 3,800.00
CT Coronary Angiography (Estimated Advance)	₹ 12,500.00
Pharmacy (Estimated for 30 Days)	₹ 4,100.00
Total Estimated Care Cost	₹ 24,800.00
